Rubber spikes included

ESPRESSO **BLACK**

HECO´s Victa Prime Sub 252 A is the active subwoofer in the series that can be used to build a fully-fledged and powerful home cinema system. Equipped with HECO´s tried and tested long-fibre kraft paper, the 260 mm long-throw driver ensures that even low rumbling home cinema sequences are completely free from distortion. The housing of the subwoofer, which also exhibits slightly rounded sides, falls in line with the visual concept of the Victa Prime series. At the same time, a solid housing construction, which consists of layers of glued and moulded MDF panels, provides optimum operating conditions for the bass driver.
