

Bluetooth® INPUT MODULE FOR HELIX / MATCH DEVICES

Congratulations!

Dear Customer,

congratulations on your purchase of this high-quality HELIX / MATCH EXTENSION CARD. This module is produced by using the latest technology. We wish you many hours of enjoyment with your new Audiotec Fischer product.

Yours,
AUDIOTEC FISCHER

General installation instructions for HELIX / MATCH components

To prevent damage to the unit / module and possible injury, read this manual carefully and follow all installation instructions. This product has been checked for proper function prior to shipping and is guaranteed against manufacturing defects.

Before starting your installation, disconnect the battery's negative terminal and all cables from the device to prevent damage to the unit / module, fire and / or risk of injury. For a proper performance and to ensure full warranty coverage, we strongly recommend to get this product installed by an authorized HELIX / MATCH dealer.

Install the Extension Card only in the designated device and its specific slot. Using the module in other devices or slots can result in damage of the Extension Card, the device, the head unit / radio or other connected devices!

Technical data

Bluetooth® standard:	v3.0 + EDR
Bluetooth® profile:	A2DP
Bluetooth® codec:	SBC and Qualcomm® aptX™
Number of paired devices:	8
Wireless frequency range:	2402 ~ 2480 MHz
Range:	Up to 10 m
Digital optical output:	SPDIF with either 96 kHz / 24 Bit or 48 kHz / 24 Bit depending on sampling rate of the device

Mounting information

1. First disconnect all cables from the device.
2. Depending on the device there are two possibilities to get access to the Extension Card slot.
 1. Bottom plate is bolted: untighten the screws of the bottom plate and remove it. Afterwards dismantle the appropriate side panel by removing its screws.
 2. Bottom plate is not bolted: dismantle the appropriate side panel by removing its screws and pull out the bottom plate sideways.
3. Remove the nut and the washer from the antenna socket of the Extension Card.
4. Insert the Extension Card into the specific slot of the device which is marked in the following picture (the picture representatively displays the Extension Card slot of the HELIX DSP.2). The exact position of the slot can be found in the manual of each device:

5. Make sure that the module is installed properly and all pins are fully inserted into the socket:

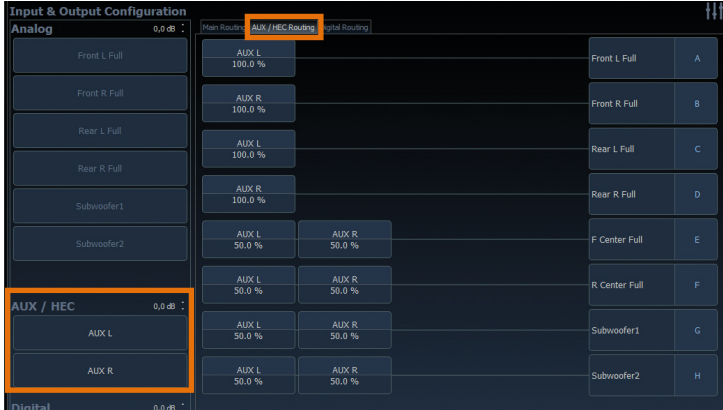

6. If the bottom plate was bolted, fix the new side panel which is delivered with the Extension Card. Afterwards reinsert the bottom plate and fix it, too. Otherwise reinsert the bottom plate and fix the new side panel with the screws.
7. Put the washer and the nut on the antenna socket and bolt it to the side panel.
Caution: Do not overtighten the nut as this may damage the socket!

8. Reconnect all cables to the device.

Signal routing of the Extension Card

As soon as the Extension Card is installed, it is automatically detected by the device. Now you can allocate the Extension Card to the desired outputs in the “AUX / HEC (MEC) Routing” matrix.

Several new features are visible in the DSP PC-Tool after installing an Extension Card.

Pairing of the Extension Card with other Bluetooth® devices

The HEC / MEC BT module supports the A2DP profile with Qualcomm® aptX™ codec for maximum sound performance. The digital Bluetooth® data stream in I²S format is directly fed into the DSP without any interim signal conversion. A one-time pairing procedure is mandatory to establish a connection between the HELIX / MATCH device and your Bluetooth® device. Make sure that the Bluetooth® function on your device has been activated before you start the pairing process.

Important: The Status LED of the Bluetooth® module flashes alternately red and green. After three minutes the pairing mode is left automatically if the connection has not been established.

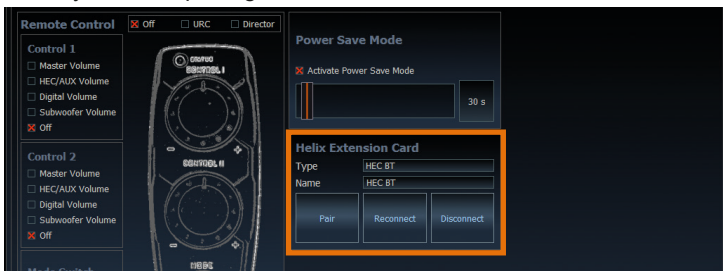

Option a)

Turn on the HELIX / MATCH device and push the “control” button < 1 sec. in order to start the pairing mode (the picture representative-ly displays the “control” button of the HELIX DSP.2):

Option b)

Directly start the pairing mode in the DSP PC-Tool software:

After the pairing mode is activated the Bluetooth® network can be found under the name “HEC / MEC BT”. There is also the possibility to change the name by clicking on the name field of the HELIX / MATCH EXTENSION CARD section of the DCM menu.

The HEC / MEC BT module can be paired with up to eight Bluetooth® devices. As soon as you try to pair a ninth device, the first one will be erased automatically from the pairing list.

Note that the HEC / MEC BT module solely allows the audio transmission of one single Bluetooth® device at a time.

The optical SPDIF output of the HEC / MEC BT module

The installation of the Extension Card adds as well an additional digital optical SPDIF output to your device. This output allows to transmit any unprocessed input or processed output signals to other devices.

A new matrix “Digital Output Routing” appears in the “Input and Output Configuration” page in which you can make your desired settings.

The digital output delivers an uncoded stereo PCM signal with either 96 kHz / 24 Bit or 48 kHz / 24 Bit, depending on the sampling rate of the designated device.

Warranty disclaimer

The limited warranty comply with legal regulations. Failures or damages caused by overload or improper use are not covered by the warranty. Please return the defective product only with a valid proof of purchase and a detailed malfunction description. Technical specifications are subject to change! Errors are reserved!

For damages on the vehicle and the device, caused by handling errors of the module, we can't assume liability. These devices are certified for the use in vehicles within the European Community (EC).
